

## Task 1.4

### Title

Geo-data infrastructure and analysis

### Project (presented on the following page)

GeoTherm: The Federal Data Infrastructure for Deep Geothermal Energy

M. Faubert, M. Manzini, L. Boulicault, L. Glaus, C. Minnig, S. Brodhag, R. Baumberger

# GeoTherm

## The Federal Data Infrastructure for Deep Geothermal Energy

M.Faubert\*, M.Manzini\*, L.Boulicault\*, L.Glaus\*\*, C.Minnig\*, S.Brodhag\*, R.Baumberger\*

\*Federal Office of Topography swisstopo, Swiss Geological Survey, Seftigenstrasse 264, CH-3084 Wabern  
\*\*SCCER-SoE, ETH Zürich, Sonneggstrasse 5, CH-8092 Zürich

**GeoTherm is the public federal database for deep geothermal energy. It provides a data infrastructure for all existing and future data. It facilitates their access and usability.**

### Challenges for geothermal projects

- Having an updated national overview of relevant data
- Difficult access to data limits our understanding of swiss deep geology
- Limited understanding of subsurface increases risks for geothermal projects
- Data acquisition and inventorization is expensive and time consuming

### Advantages of GeoTherm

- ✓ Harmonized data in Switzerland
- ✓ Perennial data storage
- ✓ Easy access to free data
- ✓ Overview of existing data

### Data web-publication

In order to make the existing data visible, we always publish the metadata of existing datasets.

**Metadata**<sup>[8]</sup>: Data describing data. Allows to find the data and to assess their relevance. E.g. Location coordinate, owner, content, etc.

**Data**<sup>[8]</sup>: Findings gained through observations, measurements, statistical surveys. Data can be stored in analog, digital or physical form.

The use and publication of all collected data are agreed upon by a contract between the data owner and swisstopo. Data from projects which were partially or fully financed by the state will be published according to the EnA<sup>[4]</sup> law and the legal framework of geological data<sup>[7]</sup> (geologyportal.ch).

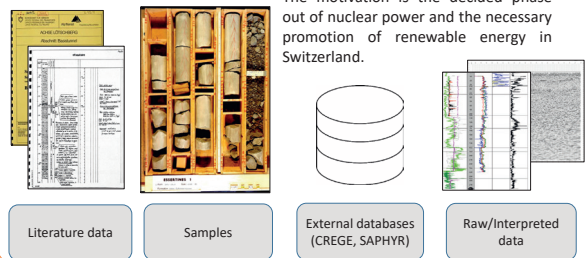

\*Geo Information and Production System

### Data Collection

We collect geological data of national interest<sup>[2]</sup> that are relevant for developing deep geothermal projects. The motivation is the decided phase out of nuclear power and the necessary promotion of renewable energy in Switzerland.

### Data model<sup>[6]</sup>

- Definition and harmonization of standards (data format, metadata)
- Selection and organization of relevant data
- Quality checks

### Products: 3 layers

1. Deep geothermal projects (now available on map.geo.admin.ch)
2. Geothermal potential studies (in prep.)
3. Wells >500m MD (in prep.)

### Perspective

- Integration of cantons data
- Layer of Reflexion Seismic
- Layer of Seismic Monitoring (in coll. With SED)
- Layer of temperature

Update of the heat flow map (in coll. with SGPK)

Parametrizing GeoMol 3D model<sup>[9]</sup> with temperature data

### Take Home Message

GeoTherm will facilitate the development of new deep geothermal projects by **enhancing geological data exchanges**. This project highly contributes to the Federal Energy Strategy 2050.

Only an **active collaboration** and **transparent sharing** of data between all the involved stakeholders will help us to apply the new prescriptions for energy in Switzerland.

### Acknowledgments

We would like to thank every person that supports us and without whom this project would not have taken place:  
BFE collaborators, swisstopo collaborators, swisstopo KOGIS  
Everyone that contributed to the project in Cantonal and Federal administrations  
Universities and ETHZ (UniNe, UniGe, UniBe)  
Regina Reber, Serge Zacharias, Emilie Sammlal
